

HOLMIUM LASER ENUCLEATION PROSTATA (HoLEP)

HoLEP vs. TURP

HoLEP

HoLEP uses a laser to remove the benign enlarged parts of the prostate anatomically and completely.

- **En-bloc enucleation** ✓
- **Less risk of bleeding** ✓
- **Regardless of prostate size** ✓
- **Catheter removal after 2 days** ✓
- **Hospitalization up to 3 days** ✓

TUR-P

During TURP, an endoscope is inserted into the urethra and the enlarged prostate tissue is removed using a resection loop under alternating current.

- **Higher risk of bleeding**
- **Risk of TUR-syndrome**
- **Limited to prostate sizes of 80-100g**
- **Hospitalization up to 7 days**

1. LASER ENUCLEATION HoLEP SURGERY

During HoLEP, a special laser resectoscope is used to separate the adenoma from the prostate capsule.

LASER ENUCLEATION WITH ENDOSCOPE

All STEMA laser resectoscopes consist of an outer and inner shaft, where only the inner shaft rotates when the device needs to be turned. This minimizes possible urethral trauma.

2. TISSUE MORCELLATION HoLEP SURGERY

After laser enucleation, the prostate adenoma is morcellated and transported in the bladder (fig.1)

TISSUE MORCELLATION WITH MORCESCOPE

The STEMA Morcescope has a diameter of 22 French and is the smallest resectoscope for Holmium laser enucleation prostate.

3. LASER ENUCLEATION SET | 18.5 FR.

HD CYSTOSCOPE

Ø 2.9mm, autoclavable, 302mm WL

- 1 30° viewing angle
- 2 12° viewing angle

WORKING ELEMENT

Titanium, passive cutting, handle closed, 17.5 Fr., probe channel 0.8mm

OUTER SHEATH

with perforation, rotatable, 18.5 Fr.

INNER SHEATH

with ceramic isolation, rotatable, 17.5 Fr.

OBTURATOR

Standard, 17.5 Fr.

VIEWING OBTURATOR

17.5 Fr. with 5 Fr. instrument channel

MORCSCOPE

22 Fr., WL 180mm, 85° field of view, 40.000 px, 0° direction of view

OUTER SHEATH

with perforation, rotatable, 22 Fr.
